

GoMama

Project	GoMama
Project leaders	Eric Ramos, successful entrepreneur
Estimated Reach	In excess of 20M users across the United States and Central and South America
Status	Heads of terms and technical architecture being designed
Web	www.gomama.io /
Of note	Large potential user adoption, based on an existing user base Potentially huge volume Showcase for other applications in Latin America, and globally
Revenue streams	Money transfers payable in XCO, driving fees Ingress/egress of fiat Broad wallet download and usage will drive GoMama's business. 360A fees

The GoMama project will use blockchain to allow these customers to quickly and inexpensively transfer money, a benefit which can be immediately marketed to the existing user base via the existing distribution network.

GoMama will develop a platform which allows users to:

- Send and receive secure messages from the same mobile platform that allows millions of unbanked and underbanked customers to easily and inexpensively transfer money to friends and family.
- Make cross border transfers, pay bills and recharge mobile phones all from a simple to use app.
- Make fast and inexpensive money transfers using blockchain, dramatically reducing fees and waiting times.
- Fund GoMama from a mobile app, website and more than 40,000 point of sale locations in the United States.

The platform will use the Coinweb protocol, which will in turn incorporate Stellar, integrating it with specific features of other blockchains.
